Okay Type, LLC
Web Use Addendum

1. Permitted Use

This Addendum extends the End User License Agreement to allow you to use certain fonts on a single website using the CSS @font-face method, up to a maximum number of total pageviews per month, as detailed on your Order Confirmation.

2. Web Definitions

A “web” is a font used with the CSS @font-face method to display text on a website. A “website” is a collection of related webpages organized under a single domain. A “domain” is the top-level URL directory of a website. A “pageview” is a single request to load a single page on your website that uses the fonts via CSS @font-face.

3. Parties

You must own the website the web fonts are used on and control its content. You may not sell, lend, or transfer this license to a third party without written permission from Okay Type.

4. Pageview Increases

You must monitor the total monthly pageviews the website receives. If you exceed your licensed number of pageviews by 20% in any three consecutive months or any six months over the course of a year, you must upgrade your license to cover the increased number of pageviews. Contact Okay Type for more information.

5. Technical Use

You may only self-host the web fonts on your website using the CSS @font-face method. Other web methods, such as SVG, Cufón, typeface.js, or Flash are not allowed. You may not use the fonts on a third-party web service without written approval from Okay Type.

6. Editable Use

In addition to displaying text elements, you may also use the web fonts in user-editable input forms. Any other user-editable use of the fonts, such as in the creation or customization of products, documents, templates, or other digital assets, is not allowed.

7. Conversions and Modifications

You may not edit, convert, or modify the web fonts in any manner. This includes, but is not limited to, changing the file formats, font name tables and metadata, or altering the design. There is one exception: you are allowed to subset the character set of the fonts in order to reduce their file size. Okay Type is not responsible, however, for any technical issues that might result from your subsetting.

8. Third-Party Developers

You may provide a copy of the fonts to a third-party web developer exclusively for the purpose of writing and testing the website’s code, and only if they agree: 1) to follow the terms of this license; 2) to only use the fonts for the

production of your project; and 3) to delete all copies of the font immediately after completing the work.

Use of the fonts beyond the sole purpose of writing your website's code, such as creating the visual design of the website or generating materials outside of the website, is not allowed. In those cases, the third-party would need to purchase their own license to use the fonts.

9. Protection Responsibility

You agree to make all reasonable effort to protect the web fonts from unauthorized access or use, including, but not limited to, direct downloading of the files or hot-linking by external websites. Also, you may not include the fonts in any publicly accessible collection of source code or assets.
